ANALYSIS

What you need to know

MSFT surged 4.6% today

Investigate the cause — large single-day moves often signal a news catalyst. Check for earnings surprises, analyst upgrades/downgrades, or sector-wide rotation.

⚠️ Overbought Positions: IVV, OEF, MSFT, EFV

RSI above 70 indicates these positions are technically stretched. This doesn't mean sell — but it does mean don't add more here. Wait for a pullback before increasing exposure. If any of these drop 5-8%, that would be a better entry point.

RADAR

Bottoming opportunities

Stocks showing early recovery signals after significant pullbacks. These are candidates worth investigating, not automatic buys.
